Client Background	
is a year-old individual who has a diagnosis of . was referred due to deficits in communication, socialization and adaptive living skills, as well as presence of maladaptive behaviors, as relates to ASD diagnosis.	
Developmental History	was born following a pregnancy.

Medical	has other known medical conditions: ☐Yes ☐No has other known food/drug allergies: ☐Yes ☐No If yes, please list:
Mental Health	has additional mental health diagnosis/es: ☐ Yes ☐ No If yes, please list: has history of abuse: ☐ Yes ☐ No has history of sexualized behavior: ☐ Yes ☐ No has past or present substance use: ☐ Yes ☐ No had exposure to alcohol/nicotine/other substances: ☐ Yes ☐ No
Current Medication(s)	currently taking medication(s). Medication(s):
Educational/ Daily Setting	an IEP.
Home/Family	
Home/Family Information	There are vocational, educational, cultural, and spiritual areas that may impact treatment.. The following individuals will be involved in the treatment planning process: s family accessing community supports. There current legal issues related to client and/or family. at risk for an out of home placement.
Family Medical History	s family medical history is significant for the following conditions:
Family Mental Health History	s family mental health history is significant for the following conditions:

Client Input and Assent

Per observation/parent report, demonstrates the ability to assent for specific treatment goals/activities by can also demonstrate removal of assent for specific treatment goals/activities by 's primary communication mode:

demonstrates the ability to:

☐ Use simple tacts

☐ Use simple mands

☐ Use simple intraverbals

☐ Use complex tacts

☐ Use complex mands

☐ Use complex intraverbals

☐ Make choices

Modifications/Supports Utilized During Assessment

Parent/Caregiver Input and Assent

s parent/caregiver was provided with an overview of the treatment process, as well as realistic expectations regarding progress. s parent/caregiver input was utilized to help inform selection of goals to comprise s treatment plan. Should 's parent/caregiver remove assent for these goals at any time, BCBA will be notified and modifications will be made to the treatment plan.

Assessment
Indirect Assessment Methods
☐ Family/Caregiver Interview ☐ Records Reviewed: ☐ Functional Assessment Screening Tool (FAST) ☐ Vineland Adaptive Behavior Scales ☐ Other:
Direct Observation Methods
☐ ABC Charting ☐ Functional Behavior Assessment ☐ Verbal Behavior Milestones Assessment & Placement Program ☐ Assessment of Basic Language & Learning Skills - ABLLS, Revised ☐ Socially Savvy Assessment ☐ Other: *Assessment results can be found in a later section of the report.
Naturalistic Direct Observation
Date of Observation:

Preference Assessment	
Assessment(s) Utilized	Identified Preference(s)/Potential Reinforcer(s)

Assessment of Client Functioning
Current Skill Deficits as Relates to DSM-V Criteria
demonstrates skill deficits across several domains consistent with a diagnosis of autism spectrum disorder (ASD). These deficits are aligned with the core diagnostic criteria outlined in the DSM-V, including impairments in social communication and the presence of restricted or repetitive patterns of behavior.
Current Levels of Client Presentation

Language/Communication Skills	
Social Skills	
Play/Leisure Skills	
Interfering or Mild Inappropriate Behaviors	
Severe Behavior (e.g., Aggression, Property Destruction)	
Coping and Tolerance Skills	
Cognitive/Pre-academic Skills	
Independent Living/Self-help Skills	
Community Integration	
Safety Skills	

Referral for Other Services
During the assessment period, the following non-ABA-related concerns were noted:

To address these additional concerns, consultation with the following professional/s is recommended:

☐ Speech-Language Pathologist

☐ Occupational Therapist

☐ Physical Therapist

☐ Medical Specialist

☐ Psychiatrist

☐ Mental Health Provider

Short Term Goals and Targets
Targets were developed based on assessment findings and baseline performance. All targets are generally expected to be met 6 months from report completion date. Anticipated date of mastery for treatment targets is .
Communication
Socialization
Behavior Reduction

☐ exhibited the following lower-priority behaviors: . These behaviors are noted as mild and occur at a low frequency and low intensity. At this time, these behaviors do not pose safety concerns or require direct intervention. Data collection and clinical monitoring will continue to assess for any change in presentation. Should behaviors escalate or begin to impact functioning, appropriate treatment goals and interventions will be implemented.

☐ did not present with any maladaptive behaviors during the assessment. Therefore, a Behavior Intervention Plan is not warranted at this time. The BCBA will continue to provide ongoing supervision and will update the treatment plan and documentation should any maladaptive behaviors emerge.

Parent /Caregiver Training

Parent(s)/Caregiver(s) will partake in care by participating in formal parent/caregiver training sessions that will take place at a frequency Training will utilize Applied Behavior Analysis strategies Provider will brief parent(s)/caregiver on client's goals and overall progress/regression. The goals below are in place, and parent(s)/caregiver progress will be monitored during parent(s)/caregiver training sessions.

The BCBA will ensure consistent parent(s)/caregiver training throughout the treatment process. These goals align with the client's program goals and will help the parent(s)/caregiver generalize and reinforce mastered goals and assist in reaching new goals.

Parent Goals

Anticipated date of mastery for treatment targets is . All targets are generally expected to be met 6 months from report completion date.

Coordination of Care

A signed coordination of care release is on file in 's record. The parent/caregiver has authorized communication with designated providers involved in s care and has identified the specific professionals with whom information may be exchanged. Supervising clinician will be in contact with all providers involved in 's care as per the permission granted. This includes, but is not limited to, medical providers, psychiatrists, physicians, educator, other school faculty members, caregivers, related service providers and psychotherapists.

Safety and Crisis plan

During a crisis, parent/caregiver will be contacted immediately and 911 will be called. In case parent/caregiver cannot be reached during a crisis, parent/caregiver has provided the agency with names and numbers of emergency contacts who can assist in resolving the crisis.

In case of inclement weather, sessions will be canceled until it is safe to resume. Parent/Caregiver has informed staff of all s relevant medical conditions and will continue to update the agency with any changes. In case of severe behaviors, will be moved to a safe place, where he/she cannot harm him/herself and BIP will be implemented. Assistance will be called in as needed.

☐ requires an additional safety plan, see attached overview.

Fading and Discharge Planning

The overall goal of this ABA program is for to be able to function independently in all settings. The overall transition plan is to slowly decrease individual hours, moving towards group therapy. Eventually, the group hours will be decreased as well when appropriate progress is made. Slow fading of hours will ensure proper transition and maintenance of progress across all settings.

's hours of ABA will decrease when the member and his/her family's ability to generalize skills in multiple settings increases.

The member's readiness to move from higher levels of services (home) to lower levels of services (outpatient individual, social skills group, medication management, mainstream education, adult assisted living etc) will be closely monitored and therapy hours will be reduced accordingly.

will be considered for discharge when the majority of long-term program goals listed below are mastered and maladaptive behaviors are in the "mild" range. As well, demonstrates the ability to acquire new skills and meet their needs in less intensive or less restrictive settings.

may also be considered for discharge in the event that is no longer able to participate in treatment and/or continually fails to achieve targeted goals, despite multiple attempts at identifying and addressing barriers to progress. Ongoing communication and coordination between the supervising clinician, the parent/caregiver, and other professionals will be maintained to monitor and support s progress.

Discharge Goals

Summary/Recommendations for ABA Services

In summary, received a diagnosis of and was referred for ABA services. After a thorough assessment, continues to present with multiple core deficits pertaining to this diagnosis.

Applied Behavior Analysis (ABA) therapy is recommended to support in acquiring essential skills necessary for improved functioning across all settings. ABA is a well□established, evidence□based treatment for autism spectrum disorder that directly targets core deficits in communication, socialization, and maladaptive behaviors. The recommended services are clinically justified to address 's functional impairments, improve skill acquisition, and reduce behaviors that interfere with daily functioning and safety. ABA is recognized as medically necessary to treat the symptoms and functional challenges associated with 's diagnosis and aligns with accepted clinical standards for intervention.
